<b>Description</b> Is there a way to make just one side of a particular table cell have a thicker edge?	

#### History

Practically having 2 different border widths for the same cell? Not out of the box.

Though, it could be implemented by setting a second border for the cell over the original border.  
For a cell, the border is rendered in Pdf\_Table\_Cell\_Abstract::renderCellLayout.

Practically you could define these properties

'BORDER2\_TYPE'

'BORDER2\_SIZE'

'BORDER2\_COLOR'

and implement a second renderCellLayout.

I hope this helps a bit.
