<b>Description</b>			
The unit-tests reveals that the PHP7 produces a slightly different PDF compared to the PHP5 version. The PDF itself is identical, as it seems that the additional content is "empty", for example:			
q 0.784 0.039 0.039 rg BT 79.37 624.57 Td () Tj ET Q			
See attached screenshot.

- Subject changed from PDF result differences between PHP5 and PHP7 to PDF result differences between PHP5 and PHP7(fpdf)
- Description updated

The reason seems to come from the MultiCell function in FPDF. I haven't investigated WHY, but a substring in php5 returns false, whereas in php7 returns "".

Solution: convert ->Cell calls to string.
